RESPIRATORY PROTECTION

Willson SAF-T-FIT PLUS Disposable Particulate Respirators

The new and improved SAF-T-FIT PLUS line is more comfortable than ever, fits better than ever, offers lower breathing resistance, and is still the best value on the market. We think you'll agree that SAF-T-FIT PLUS is now the premier line of particulate disposable respirators in the industry. Look at these advanced features:

IMPROVED RESPIRATOR MATERIAL

Willson SAF-T-FIT respirators have been re-designed with an increased inner volume which feels less oppressive to the face and facilitates speech communication. The respirator material can be easily molded to individual facial contours. Filter media is latex-free and humidityresistant for maximum service life.

PRE-FORMED AND COLOR-CODED NOSE BRIDGE

Most models available in three color-coded sizes for ease of identification.

INNOVATIVE EXHALATION VALVE

Exclusive to Willson, the new, optional exhalation valve on the SAF-T-FIT PLUS respirators offers maximum frontal protection of the valve membrane while minimizing exhalation resistance. Faster evacuation of moist, exhaled air means greater overall comfort.

Survivair M15 Gas Mask

Developed by Shalon Chemical Industries, this adult mask is intended for police and law enforcement personnel, providing NIOSH approved eye, face and respiratory protection against CN, CS and P100 particulates. The design affords optimum comfort and fit, while causing minimal interference with the performance of duties, employment of weapons, and effective communication.

Key Features Include:

Lightweight, with a comfortable secure fit and low breathing resistance.

Specially formulated rubber material for:

High resistance to NBC agents
Superior comfort
Durability

- Impact resistant cylindrical plastic lenses with a wide field of vision.
- NATO-standard 40 mm threaded canister housing.
- Five-strap highly elastic head harness equipped with quick release buckles for easy donning and adjustment.
- Central voicemitter providing clear effective communication.
- Drinking system with safety connections for safe drinking in contaminated environments.
- Optional spectacles mount assembly for prescription eyeglasses.

DECONTAMINATION

Eyesaline Personal Travel Bag Kit

Ideal for field use, remote sites or on-the-go situations

This kit contains 12 sterile eyewash bottles (6 of each 1 oz. and 4 oz.) in individual compartments and has room for additional first aid supplies. Durable vinyl bag has a strap that adjusts to fit around your vehicle's seat or headrest for quick accessibility. Replacement bottles sold separately, see "related items" above. USA made.

Fend-all® Pure Flow 1000®

Pure Flow 1000 delivers unequalled eyewash safety, reliability, and value. The patented system delivers purified, contaminant-free, and physiologically correct Eyesaline® solution from factory-sealed cartridges. Pure Flow 1000 does not require costly plumbing. It features a fluid pressure balancing system that provides a constant fluid flow rate and stream height for the entire 15-minute flushing period required by ANSI Z358.1-2004. Pure Flow 1000 factory-sealed cartridges last up to 24 months,* at least four times longer than other primary self-contained eyewash devices.

De-Fend® Emergency Decontamination Shower

The De-Fend Decontamination Shower is designed to provide decontamination facilities in accordance with OSHA standard 1910.120 without distracting emergency responders from their primary task. It is ideal for a variety of locations, including construction sites, loading docks, agricultural locations, and other emergency response areas. The shower flushes contaminants from the worker's protective clothing while the retention pool collects the rinse water. The captured fluid, which may include hazardous materials, may then be disposed of properly.

Fend-all® Wallstation - Eyesaline® Refill Bottles

Durable Eyesaline Wall Stations provide close-to-the-work convenience and immediate accessibility. If the eye injury is not incapacitating, the injured person can be helped to an emergency eyewash device during the initial flushing, helping to eliminate any delay in obtaining complete 15-minute decontamination of the eye(s). Directions for use are permanently printed on each wall station. Wall Stations are Eyesaline green for easy identification.
